

UVend Group of Companies Develops Wireless Digital Platform for the Vending Industry

Company develops and deploys a wireless digital locker for the vending industry

BURLINGTON, ON, CANADA. February 17, 2017 – www.uvendgroup.com (the “Company”), (UVG) a self serve kiosk developer / Digital Management Company is pleased to announce today that we have designed, developed, and will be deploying our wireless digital platform for the Vending industry.

The concept was originally developed for our Sports and Telecom partners then we decided to offer the same concept to other vending operators as an additional income stream says Paul Neelin Founder. The concept is a separate light weight, easy to install, “Digital Locker” that is 14” W x 37” D x 72” H and opens from the front.

The turnkey Digital locker is equipped with a wireless 22” digital touch screen, wireless modem, electrical outlet, has adjustable interior shelving for dry good storage, exterior adjustable feet and a commercial locking system says Neelin.

The design allows the “Digital Locker” to be attached to almost any operating kiosk in the market today. Its is shipped as a turnkey addition to vending machine operators nationally and internationally. Our industry has tight margins and operating costs continue to rise and this concept can either offset some of these costs or increase your bottom line says Neelin.

The operator is encouraged to work with their host location and to also offer advertising ad space to local businesses, the Hair Salon, the Dentist, the Car Dealership, the Pizza Shop, the Hotel or Travel Agent for that additional ad revenue.

Our first two (2) Digital lockers will be deployed in the next 10 days and we are excited to have this interest at this early stage is a great sign. Our plans will be to expand the concept nationally and internationally.

“Digital Command Center” We have inter-graded our in-house Digital Command Center where we will wireless manage all ads globally says Neelin. Operators simply email us their portrait ads in our requested format and our design team will recreate them to match our system specifications. We will then review the ad with the operator and final approval; we will send the same ad to any one location or thousands of locations simultaneously.
